

Biomixing Digital Transformation Proposal: Craveva Unified Cognitive ERP

Prepared for: Biomixing (Agri-tech/Biotech)
Technology Partner: Craveva
Date: 2026-02-13

1. Executive Summary

Biomixing is at the forefront of sustainable farming solutions, yet its rapid growth in specialized biotech products (like EHPurge) has introduced operational complexities—specifically in **custom recipe management, inventory traceability, and multi-stage approval workflows**.

To support this rapid scaling, we propose the **Craveva Unified Cognitive ERP**:

1. **Craveva ERP (hub.craveva.com)**: A robust, modular operational backbone tailored for manufacturing and distribution.
2. **Craveva AI (ai.craveva.com)**: A native "AI Brain" that lives within the ecosystem, providing real-time intelligence to Executives, R&D, and Factory Directors.

The Result: A seamless architecture where the President can review recipes, the Factory Director can check stock, and the VP can simulate margins—all in one unified platform.

2. The Solution: Unified Cognitive ERP

We propose a single ecosystem where operations and intelligence are inseparable.

2.1 The Operational Backbone (Craveva ERP)

Craveva ERP handles the core lifecycle:

Module	Function for Biomixing
Leads & Estimates	Manages the "Custom Recipe" request flow from distributors (e.g., Siam Shrimp).
Project Management	Replaces manual "Project Request Forms". Tracks the Factory Director's tasks (Labeling, Mixing) and Business Assistant's checks.
Inventory & Purchase	Manages critical biotech raw materials (Probiotics, Feed Additives) with batch tracking.
Finance & Invoicing	Automates the "Settlement" phase, linking delivery notes directly to invoices.

2.2 The Intelligence Layer (Craveva AI)

Because the AI lives where the data lives, there is **zero latency**.

Agent Role	Capability	Biomixing Use Case
Sales AI Agent	Historical Intelligence	<i>President's Review:</i> Instantly retrieves past successful formulations for a specific client to aid approval decisions.

Analytic AI Agent	Predictive Simulation	<i>VP's Pricing:</i> Simulates "What if raw material costs rise by 5%?" to set safe margins.
Analytic AI Agent	Operational Query	<i>Factory Director:</i> Checks real-time stock across warehouses using natural language ("Do we have enough Base A?").

2.3 Omni-Channel Sales Agent (LINE & WhatsApp)

To support Biomixing's multinational sales operations, Craveva delivers a fully integrated **Omni-Channel Sales Agent** embedded directly into the Unified Cognitive ERP.

This is not a chatbot layer. It is the same AI Sales Brain that supports executive decision-making — extended into frontline messaging channels.

One AI Brain Across All Channels

Whether a sales interaction happens inside the ERP, on LINE, or via WhatsApp, the intelligence engine remains the same:

- Real-time access to client history, pricing rules, and stock levels
- Margin-safe quote recommendations
- Instant formulation references
- Structured logging of every interaction into the ERP

Every message becomes actionable commercial data.

Region-Optimised Execution

- **LINE (Asia Markets):**
Enables sales teams in Thailand, Japan, and Taiwan to retrieve order history, generate quotations, and receive AI-assisted technical responses directly inside chat.
- **WhatsApp (Global / EMEA / LATAM):**
Provides customers and distributors with order status, invoice access, shipment tracking, and AI-supported product recommendations.

All interactions are normalized into a single consolidated client timeline within Craveva.

ERP-Native Architecture

Both channels connect securely via webhooks into Craveva, ensuring:

- Live ERP data is always used
- Quotes and stock checks execute instantly inside the system
- No duplicate data environments
- No operational silos

Messaging is simply another interface to the same operational core.

Strategic Impact for Biomixing

- **Consistency at Scale:** One pricing logic and knowledge base across all countries.
- **Speed to Revenue:** Sales and technical responses delivered in seconds.
- **Operational Discipline:** Every conversation becomes traceable ERP data.
- **Global Flexibility:** Local teams retain preferred messaging platforms without compromising data integrity.

This positions Biomixing as a digitally unified, AI-enabled multinational sales organisation — not just a biotech manufacturer.

3. Addressing Biomixing's Specific Workflow

We have analyzed your current process flow and designed Craveva to eliminate bottlenecks at each step:

Phase 1: Order & Recipe Review (The "3-Day Wait")

- **Current Process:** Sales submits a request → President reviews formula history → VP checks pricing. This manual loop often takes 3-4 days.
- **Craveva Solution:**
 - **Sales AI Agent:** As the Sales Rep types the Estimate, the AI instantly displays: *"Last 3 similar recipes for Siam Shrimp were approved with 15% margin."*
 - **Result:** The President has all data *immediately*, potentially reducing approval time from days to hours.

Phase 2: Production Planning (The "Manual Gap")

- **Current Process:** Factory Director manually checks stock to decide: "*Do we have enough?*" If yes (3-4 days), if no (5-7 days). This relies on paper "Project Request Forms".
- **Craveva Solution:**
 - **Analytic AI Agent:** Automatically scans the Bill of Materials (BOM) against live inventory.
 - **Result:** The system flags "Low Stock" *before* the order is even signed, triggering an automatic Purchase Request for the missing biotech ingredients.

Phase 3: Production & Quality (Compliance)

- **Current Process:** Manual checks for "Labeling", "Mixing", and "Quality Certs" before shipping. Risk of human error.
- **Craveva Solution:**
 - **Projects Module:** Digital task tracking (Weighing, Mixing, Packing) ensures no step is skipped.
 - **AI Quality Agent:** Validates certifications automatically before project completion.
 - **Result:** 100% production compliance and traceability.

Phase 4: Fulfillment & Finance (Delivery)

- **Current Process:** Manual shipping decisions and invoicing delays. Risk of temperature deviations.
 - **Craveva Solution:**
 - **Logistics AI Agent:** Automatically verifies storage conditions (e.g., "Keep < 25°C") and suggests the best Cold Chain carrier.
 - **Finance Module:** Automates invoicing upon dispatch.
 - **Result:** Safe routing and faster cash flow.
-

4. Implementation Roadmap (Fast-Track)

Craveva's modular architecture allows for a phased, high-impact rollout.

Phase 1: Operations Foundation (Weeks 1-4)

- **Goal:** Digitize the "Order to Cash" flow.
- **Actions:**
 - Setup Craveva ERP (Sales, Inventory, Projects).
 - Import Product Master (EHPurge, Probiotics).
 - Configure the "President Approval" workflow in Estimates.

Phase 2: Intelligence Activation (Weeks 5-8)

- **Goal:** Turn data into decisions.
 - **Actions:**
 - Activate **Sales AI Agent**: Train on historical recipe PDFs and client emails.
 - Activate **Analytic AI Agent**: Connect to Inventory for real-time stock queries.
 - **Training**: Show the Factory Director how to "talk" to the ERP.
-

5. Strategic Advantage

By choosing **Craveva (ERP + AI)**, Biomixing gains:

1. **Unified Ecosystem:** A single platform for both operations (Order/Delivery) and intelligence (Forecasting/Approvals).
2. **Agility:** Custom workflows (like your Recipe Review) are native configurations.
3. **Future-Proofing:** As your biotech product lines grow, the AI learns and adapts to new formulations automatically.

Conclusion: This proposal aligns perfectly with your goal of "Pioneering Sustainable Farming Solutions" by giving you a sustainable, scalable digital infrastructure.
