

One AI Brain

An AI Intelligence Layer to Maximize BiomiXin's NetSuite Investment

Prepared for: Executive Leadership & Board

Company: BiomiXin (Shennong Biotechnology)

Prepared by: Craveva AI Enterprise

1. Executive Overview

BiomiXin is entering its next phase of growth — expanding across multiple countries, product lines, regulatory environments, and distribution models. To support this scale, BiomiXin is implementing **NetSuite as its core ERP system**, establishing a strong system of record for finance, supply chain, and operations.

However, as scale increases, **data alone is not enough**.

Critical intelligence remains fragmented across:

- ERP records (NetSuite)
- R&D trial documents and PDFs
- Regulatory evidence
- Excel files and internal reports
- Human knowledge distributed across teams

This creates **decision latency, reporting overhead, and execution risk**.

Craveva proposes “One AI Brain” — an AI-native intelligence layer that sits **on top of NetSuite and other data sources**, transforming structured and unstructured data into real-time, evidence-backed business intelligence.

This is **not a replacement for NetSuite**.

It is the **intelligence layer that unlocks NetSuite's full strategic value**.

2. The Core Business Problem

As BiomiXin scales across Taiwan, Singapore, Japan, Malaysia, and beyond:

- Executives depend on **manual reporting** to answer strategic questions
- R&D knowledge is difficult to reuse for regulatory and distributor needs
- Cross-entity visibility requires human coordination
- ERP systems record transactions but **do not reason across data**

The risk is not inefficiency — it is loss of execution velocity.

In science-driven industries, speed and accuracy directly impact competitiveness.

3. The Craveva Solution: One AI Brain

One AI Brain is an AI-native operating layer that connects to NetSuite and BiomiXin's internal knowledge base to deliver **instant, trusted intelligence**.

What One AI Brain Delivers

3.1 Executive Intelligence

- Executives ask natural-language questions across the business
("Which product has margin erosion and why?"
"Which trials support this claim for Japan?")
- AI delivers answers with **source citations**, not static reports

3.2 R&D & Regulatory Intelligence

- AI agents trained on:
 - Trial reports (PDF, Word, Excel)
 - Formulation and research documentation
 - Regulatory submissions and evidence
- Rapid generation of regulator- and distributor-ready responses

3.3 Operational & Financial Monitoring

- Continuous analysis of:
 - Inventory levels
 - Procurement patterns
 - Financial anomalies
- Early warning signals instead of month-end surprises

3.4 Zero-Disruption Architecture

- Operates on top of NetSuite and existing systems
 - No changes to accounting controls
 - No ERP workflow disruption
 - No downtime
-

4. Alignment with NetSuite Scope (Requirement Mapping)

Craveva is designed to complement NetSuite's quotation scope and maximize its ROI.

4.1 Core ERP Data Connectivity

Craveva integrates with NetSuite data domains:

Financials

- General Ledger
- AP / AR
- Multi-currency transactions
- Budget vs Actual
- Cost center and entity-level financials

Supply Chain & Inventory

- Item master (SKU, formulation, batch)
- Inventory by location
- Lot and batch tracking
- Procurement and vendor data

Sales & Distribution

- Customer master
- Sales orders
- Tiered pricing (B2B, distributors, regions)
- Sales performance analytics

Integration Method

- Read-only access
 - API or export-based synchronization
 - No disruption to NetSuite operations
-

4.2 Multi-Entity & Regional Intelligence

Aligned with NetSuite's multi-entity structure:

- Multi-subsidiary accounting
- Intercompany transactions
- Regional consolidation

Craveva enables

- Natural-language queries across:
 - Single entity
 - Regional group
 - Global consolidated view
 - Role-based access (CEO, Finance, Operations, R&D)
-

5. Modular & Scalable AI Agent Architecture

(Unlimited Expansion Capability)

Craveva is built with a **modular AI agent architecture**, allowing BiomiXin to deploy **unlimited AI agents** without system redesign.

Example AI Agents

- Executive Agent (CEO / Board)
- Finance Intelligence Agent
- Supply Chain Agent
- R&D Knowledge Agent
- Regulatory Compliance Agent
- Sales Intelligence Agent
- Distributor Support Agent

Each agent:

- Has scoped permissions
- Is trained only on relevant datasets
- Can be added, upgraded, or retired independently

This ensures **future scalability without ERP reimplementation**.

6. Scalability & Growth Readiness

Craveva supports BiomiXin's long-term growth strategy:

- New country launches
- New product lines
- New distributor and partner models
- M&A integration

New data sources can be added in days, not months, without retraining the entire system or increasing reporting headcount.

7. Security, Governance & Auditability

Enterprise-grade controls include:

- Role-based access control
- Data segregation by entity
- Full query logs
- Evidence-backed AI answers

All outputs are **explainable, auditable, and compliant**, ensuring trust at board and regulatory levels.

8. Strategic Positioning

- **NetSuite** = System of Record
- **Craveva One AI Brain** = System of Intelligence

Together, they deliver:

- Modular architecture
 - Enterprise scalability
 - Reduced operational risk
 - Intelligence-driven decision making
-

9. Implementation Approach

Phase 1 – Executive & R&D Intelligence Pilot (90 Days)

- Connect NetSuite exports and key internal documents
- Deploy executive and R&D AI agents
- Validate ROI, adoption, and decision acceleration

Phase 2 – Enterprise Expansion

- Extend AI intelligence to finance, supply chain, and sales
 - Standardize intelligence across all regions
-

10. Executive Recommendation

Approve Craveva as the **AI Intelligence Layer on top of NetSuite**, starting with a limited-scope pilot.

This approach:

- De-risks global scaling
- Accelerates decision-making
- Converts BiomiXin's scientific leadership into operational dominance

Next Step:

Authorize Phase 1 pilot and NDA to validate impact within 90 days.
